Certifications

Game Design: Art and Concepts
Specialization
Game Design and Development
Specialization

Honors-Awards

Honor to Merit Certificate

André Wesley Lins Oliveira

Senior Unity Developer | Game Developer | Gameplay Programmer |
C# | Performance Optimization
Manaus, Amazonas, Brazil

Summary

Senior Unity Developer with 7+ years of experience building games, XR applications, and interactive experiences for mobile, console, and immersive platforms. I have contributed to Samsung-related projects, helped ship Digikin Pocket Adventures on the Galaxy Store, and worked across gameplay systems, UI, Unity architecture, and performance profiling and optimization across CPU, GPU, and memory. My experience includes designing modular game architectures, implementing gameplay and UI systems, profiling performance bottlenecks, and improving runtime efficiency. I have also mentored developers and provided architectural guidance within development teams. In addition to commercial development, I have 3+ years of experience as a Game Development Instructor, teaching Unity, game programming, Scrum, Game Design, and User-Centered Design. I'm currently open to Senior Unity Developer, Gameplay Programmer, and Game Developer opportunities, including international remote and relocation roles.

Experience

Big Moxi Games

Unity Engineer

April 2026 - Present (6 months)

- Reworked core architecture and memory/garbage-collection bottlenecks, improving performance from approximately 15 FPS to a stable 60 FPS on target hardware.
- Took ownership of an early-stage Unity console prototype, becoming responsible for project setup, gameplay, UI, game systems, tools, and integrations.
- Designed and refactored the architecture using patterns such as Observer, Object Pooling and Flyweight to improve modularity, maintainability and runtime efficiency.

- Profiled and optimized runtime performance across CPU, GPU and memory, addressing garbage collection pressure with memory management, reducing draw calls, identifying overdraw, and shader preloading.
- Applied spec-driven and AI-assisted workflows using Claude Code to translate technical specifications into implementation plans, code, tests and refactoring.

Sidia Institute of Science and Technology

Software Developer (Unity)

March 2021 - July 2025 (4 years 5 months)

Manaus, AM

- Developed and shipped Unity-based products for Samsung projects, including Digikin Pocket Adventures and Creators Room, as well as additional NDA-protected XR prototypes.
- Refactored a performance-critical feature suffering from severe CPU bottlenecks, including redesigning its CPU-GPU data flow and introducing parallel processing, improving runtime performance from approximately 3 FPS to 27 FPS.
- Designed and evolved modular Unity architectures based on a ScriptableObject-driven approach, combining patterns such as Observer, State, Flyweight, and Object Pooling to improve separation of concerns and collaboration across developers.
- Mentored less-experienced developers, provided architectural guidance to the team, and temporarily assumed technical leadership for a team of five mid-level programmers during the technical lead's absences.
- Implemented gameplay systems, UI flows, and XR features using technologies such as MRTK, AR Foundation, and Meta SDK across Android and XR devices.
- Contributed across the full development lifecycle of Digikin Pocket Adventures, including architectural decisions, gameplay implementation, UI development, CPU optimization, bug fixing, release support, and post-launch maintenance.

Freelancer- Self Employed

Unity Developer

June 2019 - January 2021 (1 year 8 months)

São Paulo, Brazil

Developed games and interactive applications using Unity and C# for mobile and immersive platforms.

- Developed gameplay features and interactive applications in Unity.
- Built Augmented Reality experiences using Vuforia and AR Foundation.
- Developed Virtual Reality applications targeting Oculus Quest.
- Worked across gameplay programming, UI implementation, debugging, and general Unity development.
- Adapted solutions for different project requirements across mobile, AR, and VR experiences.

PushStart

Game Developer

January 2019 - March 2019 (3 months)

Greater São Paulo Area

Developed game features using JavaScript and a PixiJS-based SDK.

CESAR School

Game Qualification Consultant

August 2015 - December 2018 (3 years 5 months)

Recife Area, Brazil

- Taught game development classes (Unity, Introduction to Game Design, Introduction to Agile)
- Advised students through events like Technovation Challenge and SBGames.

Fábrica de Software UBTech Office/Unipê

Game Programmer (Intern)

August 2013 - July 2015 (2 years)

João Pessoa, Paraíba, Brazil

Developed gameplay mechanics using Unity and C#.

Phoebus Tecnologia

Software Development Intern

March 2015 - June 2015 (4 months)

João Pessoa, Paraíba, Brazil

Investigated and resolved software defects, primarily related to user interface issues.

Education

CESAR School

Postgraduate Certificate, Software Engineer with AI · (September 2026 - September 2027)

Centro Universitário Senac

Postgraduate Certificate, Game Development · (April 2020 - October 2021)

Universitary Centre of João Pessoa

Bachelor of Technology, Systems for Internet · (March 2013 - June 2015)
